

TECHNICAL INFORMATION: PATTERN MATCHES

Wallpaper match refers to how the pattern on one strip lines up with the next strip. Choosing the right match ensures the best visual and helps you calculate how much wallpaper you need.

RANDOM MATCH

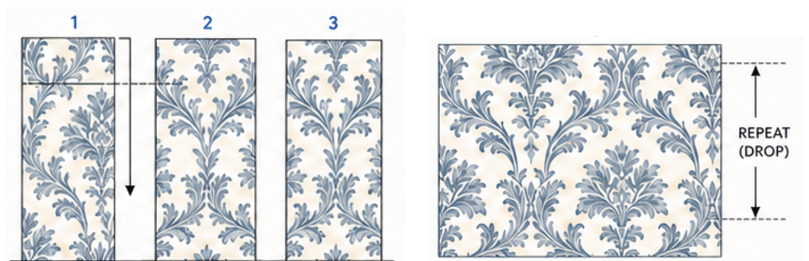

Patterns that do not have a specific match point. Examples of this would be "Stipples" (Sandpiper, Sandstone) or stripe patterns. Most of these patterns look better when every other strip is reversed, alternating top and bottom as shown in the diagram.

No pattern alignment needed.
Least waste.

DROP MATCH

There are two types. When you have a "Half-drop" match the design runs diagonally, it takes three strips to repeat the vertical design as shown in the diagram. Every other strip is the same at the ceiling line. With a "Multiple drop match" it takes four or more strips before the vertical design is repeated. Each strip is dropped by one repeat length to line up the pattern... More waste

STRAIGHT ACROSS MATCH

This is when the design matches on each strip. The design is exactly the same at the ceiling line.

Patterns line up straight across at the same height. Moderate waste.
